

# Louisiana Protection and Restoration Update

US Army Corps  
of Engineers®  
New Orleans District

March 2008

Dear Stakeholder:

Recently the Army Corps of Engineers, New Orleans District, sent a draft Technical Report to the National Academy of Sciences for external peer review. This document is posted on the Louisiana Coastal Protection and Restoration (LACPR) project Web site.

As a leader in your organization, the LACPR team would like to invite stakeholders to a series of meetings to discuss the content of the draft technical report, particularly the results of the weighting exercises completed late last year. Your consideration of the results of our initial iteration of Multi-Criteria Decision Analysis is extremely important to facilitate your continuing participation in the decision process.

Once again we are planning a series of meetings across the coast. As we have done in the past, the meetings are based on geographic area. If for you are not able to attend the meeting which is closest to you and would like to attend on a different day, please feel free to do so. After the meeting, we encourage you to share this information with your organization and its members.

The full report is available online at the LACPR Web site, [www.lacpr.usace.army.mil](http://www.lacpr.usace.army.mil). If you have questions regarding the meetings, please contact Kelly Stoll at 504.862.2911.

We look forward to your participation.
